

Accessories: Light Traps

Control the number of daylight hours

In order to obtain optimal breeding performance both light intensity and the daily amount of light hours must be precisely controlled. That's why Light Traps are often used in Poultry Houses. The vertical vanes in a Light Trap reduce the daylight ingress and assure an ultimate balance between airflow efficiency and light lux reduction. The standardized mounting clips enable easy installation on our 92, 130 and 140 cm Galvanized Box and Cone Fans. In other words, a must have accessory to further improve your growing performance!

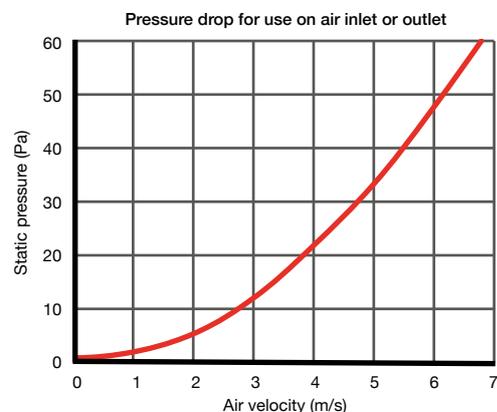

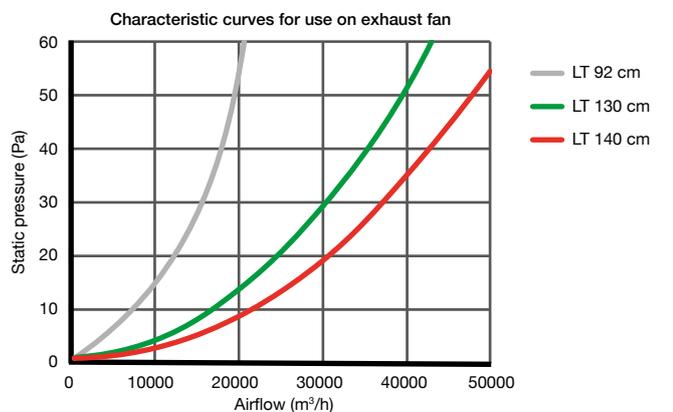

Why choose this accessory

- Self cleaning vertical vanes
- Easy to mount to, or remove from Multifan Galvanized Box and Cone Fans
- Low resistance to airflow
- For optimal growing performance
- High light reduction factor
- Known performance in combination with our fans. Ask your specialist for more information.

Features

- 3 sizes available
(for 92, 130 and 140 cm Multifan Galvanized Box and Cone Fans)
- Lightweight
- Robust galvanized casing
- Suitable for use on air inlet side or on exhaust fans
- Mounting clips included

Dimensions (mm)

Fan size	Depth	Width	Height
